Practical-3: (As per notes of UNIT-2 : Implement as per Practical 1.5)

1. Create a responsive web page involves using the viewport meta tag in the head of your HTML document.
2. Create a responsive web page by using the width and max-width Properties and Changing images according to the browser width.

```
<!DOCTYPE html>
<html>
<meta name="viewport" content="width=device-width, initial-scale=1.0">
<body>
<h2>Responsive Image</h2>
<p>When we set the CSS width property to 100%, it makes the image responsive. Resize the browser window to see the effect. </p>

<img src="img_girl.jpg" style="width:100%;">(Change the image)
</body>
</html>
```

```
<!DOCTYPE html>
<html>
<meta name="viewport" content="width=device-width, initial-scale=1.0">
<body>
<h2>Responsive Image</h2>
<p>"max-width:100%" makes the image responsive and also ensures that the image doesn't get bigger than its original size.</p>
<p>Resize the browser window to see the effect.</p>
<img src="img_girl.jpg" style="max-width:100%;height:auto;"> (Change the image)
</body>
</html>
```

3. Create a responsive web page that demonstrates responsive text size using the "vw" (viewport width) unit in CSS

```
<!DOCTYPE html>
<html>
<meta name="viewport" content="width=device-width, initial-scale=1.0">

<body>
<h1 style="font-size:10vw;">Here size is 10vw.</h1>
<p style="font-size:6vw;">Here size is 6vw.</p>
<p style="font-size:4vw;">Here size is 4vw.</p>
<p>Resize the browser window to see how the text size changes.</p>
</body>
</html>
```

4. Create a responsive web page that demonstrates media queries for creating breakpoints in the web page.

```
<!DOCTYPE html>
<html lang="en">
<head>
 <meta charset="UTF-8">
 <meta name="viewport" content="width=device-width, initial-scale=1.0">

 <title>Media Queries Example</title>
 <style>
  body {
   font-family: 'Arial', sans-serif;
   margin: 20px;
   background-color: #f4f4f4; /* Light gray background color */
  }

  h1 {
   color: #007bff; /* Blue color */
  }

  p {
   color: #333; /* Dark gray color */
  }

  /* Media query for screens larger than 600px */
  @media screen and (min-width: 600px) {
   body {
    background-color: #fff; /* White background color for larger screens */
   }

   h1 {
    font-size: 2em; /* Increase font size for larger screens */
   }
```

```
    p {
      font-size: 1.2em; /* Increase font size for larger screens */
    }
  }

  /* Media query for screens larger than 1200px */
  @media screen and (min-width: 1200px) {
    h1 {
      font-size: 2.5em; /* Further increase font size for very large screens */
    }

    p {
      font-size: 1.4em; /* Further increase font size for very large screens */
    }
  }
 </style>
</head>
<body>

 <h1>Responsive Heading</h1>

 <p>
   This is an example paragraph with text that will adapt its style based on the screen size using media queries.
 </p>

</body>
</html>
```
